CC comprising a sequence capable of hybridising under stringent conditions (1) of sequence selected from any one of 999 sequences (ABN98233-ABN99231), CC given in the specification or its fragment. A polypeptide (II) encoded by CC (I), a transgenic plant (III) comprising an exogenous nucleic acid, is CC useful for screening a candidate agent for its biological effect. (I) is CC useful in identifying homologous or related genes, in producing compositions that modulate the expression or function of its encoded protein, mapping functional regions of the protein and in studying are best capable of withstanding a particular disease or environmental cc stress. (II) and (III) are useful for screening of the protein and in studying crops to prevent or treat disease. (II) are also useful in screening assays of various plant strains to determine the strains that crops to prevent or treat disease. (II) are also useful in screening crops to prevent or treat disease. (II) are also useful in screening crops to prevent or treat disease. (II) are also useful in screening crops to prevent or treat disease. (II) are also useful in screening crops to proteins of interest, for enhance the action of tolerance cc expression of proteins of interest. (II) are also useful in screening crops to proteins of interest, for establishing the extent to which cc any specific insect and/or pathogen is responsible for damage to a particular plant, for identifying other mediators that enhance or induce tolerance to environmental stress. (I) is also useful convolved in a cc particular plant, for identifying other mediators that enhance or induce tolerance to environmental stress in of seathlishing the extent to which caps to the plant. (II) is useful in the study of genetic function and regulation, of the convolved in the study of genetic function and regulation.

CC for identifying productions of nutritional, commercial or medicinal value and convolved in the study of genetic function and regulation.

CC for interation but was obtained in electro
